## Sonoff DW2 Sensor

The Sonoff DW2 sensor can help secure your door or window to let you know whether your home is safe wherever you are. The sensor can trigger an alarm to your smartphone to inform you of an intruder when the door or window is opened. In addition, connect the [SONOFF wireless IP camera](#) and you can view who the intruder is on the sensor page of APP. You can also check the real-time opening and closing status on the eWeLink APP.

Real-time battery level display and low-battery reminder ensures you know exactly how long the sensor can run and when you need to replace batteries. With simple peel and stick installation, it is easy to fit onto door frames and window sills.

DW2-Wi-Fi comes in two pieces, the transmitter which fits onto the door or window and the magnetic switch that attaches to the frame.

\*The sensor can work for up to 3 months if the door/window is opened or closed three times a day.

\*\*If your wifi doesn't support 802.11b protocol then the Sonoff DW2 Wifi can not be paired to your WiFi network.

NOTE: Batteries not included
