

Description

Sonoff Zigbee Mini

Sonoff Zigbee Mini is a ZigBee-enabled two-way smart switch requires the [SONOFF ZBBridge](#) to work.

It is also compatible with different hubs, including Amazon Hub, Samsung SmartThings Hub and Philips Hue Hub.

Furthermore the ZigBee3.0 protocol allows ZigBee MINI and ZigBee bridge to be paired quickly and easily. However the ZigBee MINI is safer to use in your home due to the fire-proof as well as flame-retardant shell.

Additionally, AES-128 encryption ensures the safety is extended to data privacy on your devices thus it can be used as a Zigbee router to help transmit the ZigBee signal to ensure a stable connection when multiple Zigbee devices are used in your home.

In addition if you are keen on two-way control, you can connect a Single Pole Double Throw switch as the external connection to expand the control way.

Features

- APP remote control
- Preset to turn on or off, trigger the device on or off
- One-tap pairing with SONOFF ZBBridge
- Support external switch connection
- Compatible with SONOFF ZBBridge, Amazon Hub, Samsung SmartThings Hub and Philips Hue Hub
- Fire-proof and flame-retardant shell ensures maximum safety for your device
- ZigBee3.0 protocol with AES-128 encryption keeps the security of device data
